

## **Acknowledgements**

We are very pleased to come up with a mini-project titled “Autoshedding Control System” developed in C-Programming. It has been a lot of hard work and support from various individuals that made this project a success. We are really indebted to them for their regular assistance and feeds.

Mainly, we’d like to thank our subject teacher Baburam Dawadi sir for helping us through this whole period of development. he provided us with regular feedbacks and resources in making this task easier. Likewise, the guidance from our seniors were also inevitable. In the same way, our classmates Kshitiz Shrestha, Keshab Sunari, Shreebatsh Aryal (and many others) played an important role providing us with the necessary suggestions regarding the project.

We would again like to address our subject teacher for providing with this opportunity to make a good use of our understanding of the C-Programming Language.

Although the programs done in this very project are errorless, we believe that there can always be a better way to complete the task. So we make sure that we shall heartily welcome anyone who comes up with a better approach for the task and improve our program.
